

Course overview

- Lévy processes and Poisson point processes; stochastic calculus for semimartingales with jumps
- Transformations and weak solutions of stochastic differential equations
- Stochastic flows, approximation schemes and variations of SDE

Recommended textbooks

The following standard textbooks cover all a broad range of topics in stochastic analysis. Nevertheless there are substantial differences in style and content between them.

- Rogers, Williams : *Diffusions, Markov processes and martingales, Vol. 2: Ito calculus*, Cambridge UP.
- Bass : *Stochastic Processes*, Springer.
- Applebaum: *Lévy Processes and Stochastic Calculus*, Cambridge UP.
- Protter : *Stochastic integration and differential equations*, Springer.
- Revuz, Yor : *Continuous martingales and Brownian motion*, Springer.
- Karatzas, Shreve : *Brownian motion and stochastic calculus*, Springer.
- Ikeda, Watanabe: *SDE and diffusion processes*, North Holland.
- Jacod/Shiryaev: *Limit Theorems for Stochastic Processes*, Springer.
